

What is Claimed is:

1. A double eyelid forming tape comprising a resiliently elastic narrow tape member applied with an adhesive thereon.

2. A double eyelid forming tape according to Claim 1, wherein the tape member is formed of synthetic resin being stretchable and exhibiting resilient elasticity after being stretched.

3. A double eyelid forming tape according to Claim 1 or 2, wherein the adhesive is applied on one or both of the surfaces of the tape member.

4. A double eyelid forming tape according to any one of Claims 1 to 3, further comprising holding portions having no adhering property on the surfaces at both ends thereof for holding by fingertips.

5. A double eyelid forming tape according to any one of Claims 1 to 3, wherein a release sheet having a breaking point to be broken when being stretched is adhered on one or both of the surfaces of the tape member.

6. A double eyelid forming tape according to Claim 5,

wherein the breaking point is a notched groove formed generally at the center of the length of the sheet.

7. A double eyelid forming tape according to Claim 5 or 6, wherein the sheet is formed of silicon paper, or a film applied with silicon processing.

8. A method of manufacturing a double eyelid forming tape comprising the steps of: applying an adhesive on one or both of the surfaces of a resiliently elastic sheet member of a given length; forming holding portions having no adhering property at both ends when viewed in the widthwise direction; and cutting the same in the widthwise direction into narrow strips.

9. A method of manufacturing a double eyelid forming tape comprising the steps of: applying an adhesive on one or both of the surfaces of a resiliently elastic sheet member of a given length;

attaching a release sheet formed with a notched groove generally at the center of the length thereof on one or both of the surfaces of the sheet member applied with an adhesive; and

cutting the same in the widthwise direction into narrow strips.

10. A double eyelid forming string comprising a resiliently elastic string member applied with an adhesive.

11. A double eyelid forming string according to Claim 10, further comprising holding portions having no adhering property on the surfaces at both ends thereof for holding by fingertips.

12. A double eyelid forming string according to Claim 10, wherein the string member is covered up by a releasable jacket having a breaking portion to be broken when being stretched generally at the center thereof.
